

ELD SYNTHETIC SURFACE MAINTENANCE TIPS

(ELD Arena Surface, ELD Arena Rubber Granules, ELD Arena Fibre, ELD Arena Gel)

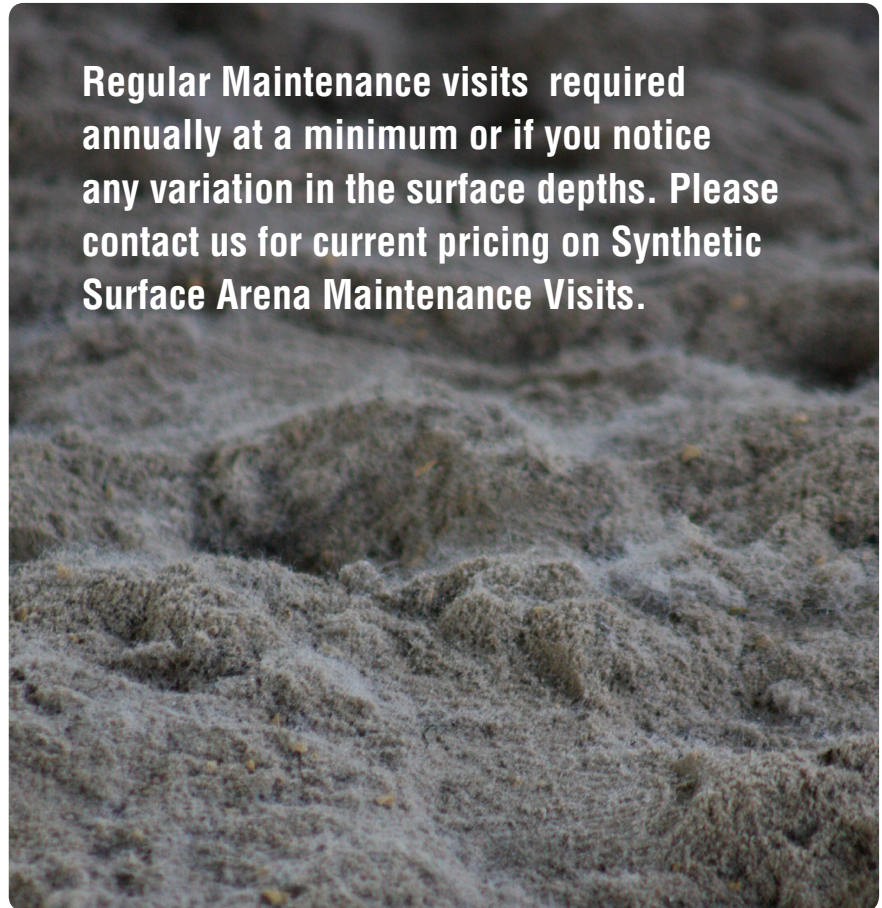

Prior to using your Maintenance tool:

- Hand rake back onto the perimeter track any loose material from your arena edge with a rake or fork.
- Place and fill in any large divets with a rake. Do not drag surface across holes.

Maintenance tools are not designed to correct un-level surfaces of this nature. All tracking, dips or divets must be hand raked first prior to the use of your chosen maintenance tool.

Do not let heavy vehicles or equipment drive over the surface other than for maintenance purposes.

- When maintaining your surface slow raking (walking speed) in straight lines is recommended retaining a consistent and steady speed. Change direction and your starting point every time you maintain your surface - try starting in a different corner each time. Do not go in the same direction twice.
- Always pick up any manure and rubbish (including leaf matter) from the surface as soon as possible. Manure and similar debris will contaminate the surface and could reduce the effectiveness of the Gel.
- Add water to the surface when it starts to feel like it's shifting under

Regular Maintenance visits required annually at a minimum or if you notice any variation in the surface depths. Please contact us for current pricing on Synthetic Surface Arena Maintenance Visits.

foot - this will assist in re-activating the ELD Arena Gel within the surface. Do not overwater the surface.

- Seasonal variations in temperature may affect the performance of the ELD Arena Gel within your surface. Adjust your maintenance routine accordingly.

It is recommended you top-up the ELD Arena Gel approximately every 2 years. Like any surface, depending on the amount of traffic, it will wear with time and use.

The recommended maintenance tool should consist of sprung tines and a roller if possible. Contact ELD for further details.

If you have any queries, please do not hesitate to contact us.
